

2N Mobility Extension

Perfectly Mobile

- ★ **All PBX functions in your mobile phone**
(call switching, call routing, etc.)
- ★ **Permanent availability**
– always on call
- ★ **Reduced international call costs**
- ★ **One telephone directory**

Today, people automatically expect you to be always available and on call. Want to meet their expectations without having to disclose your mobile phone number to all and sundry.

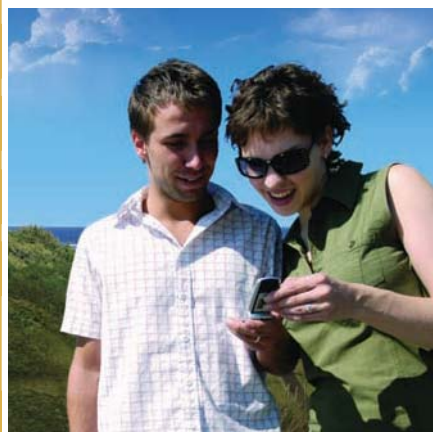

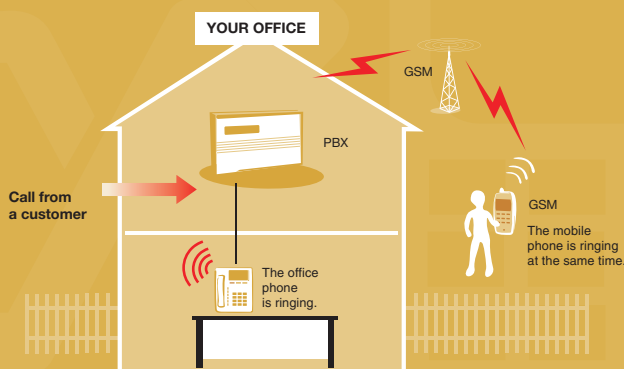

Protecting your privacy while staying available is no longer impossible, thanks to the unique Mobility Extension function. Mobility Extension allows "connecting" your mobile phone to a PBX like a standard branch, and utilizing all of its functions even if you are currently out of office. The only phone number you need to give out is your office number. You can activate or disable Mobility Extension at any time from your mobile phone.

How does Mobility Extension work?

Once you have activated Mobility Extension, people calling your office phone number will simultaneously ring your mobile phone. Depending on where you are, you may either pick up the call on your office or mobile phone, and use your mobile the same way you use your landline. Mobility Extension allows you and your employees to work anytime, anywhere they want, without needing to stay in the office, and without missing a single important call or job.

Reduced International Call Costs

When calling abroad from your mobile phone, you only pay a local call charge to your PBX. The PBX automatically reroutes the call via VoIP, greatly reducing your international call costs.

2N Omega series PBXs - Phones

Favourable choice

2N Omega series PBXs supports any of the following types of telephone sets (terminals):

2N StarPoint series system devices (4 models, 2 colours) - for the greatest comfort in call servicing

Operator's console with handsfree kits and key modules

Analogue telephone with calling line identification (CLI), group G3 faxes

Portable analogue telephone (DECT)

2N StarPoint SIP IP desk telephones

SIP IP software telephones (soft phones)
